

FABRIC STRUCTURE FOR MAKING BAGS AND THE LIKE

ABSTRACT OF THE DISCLOSURE

A fabric structure is constructed having a fabric base sheet, a viscosity layer, a polymeric back layer, and a protective layer. The polymeric back layer is prepared from SBC (styrenic block copolymer) for the advantage of low specific gravity and preventing the drawback of PVC or the like that pollutes the environment when disposed off. The protective layer is prepared from PU series or modified SBC (styrenic block copolymer) series agent. When the fabric structure used to make a bag, the front surface of the fabric base sheet is disposed outside the bag and the surface of the protective layer is disposed inside the bag.
